                    recognition of pregnancy. Interacts with endometrial receptors, probably type Interacts with endometrial receptors, probably type Interacts with endometrial receptors, probably type Interferon receptors, and blocks estrogen receptors expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian prosterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antivirial and antiproliferative potency concurrently with particular weak cycotoxicity, high antiluteolytic activity and immunomodularcry properties. In contrast with other IFNs, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TISSUE SPECIFICITY: Constitutively and exclusively expressed in TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm. DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.

MISCELLANEOUS: IFN-tau genes are intronless. They evolved from thromand as uborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with alfferent biological potency and pattern of expression.

SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KKYFQGIYDYLQEKGYSDCAWEIVRVEMMRALTVSTTLQKRLTKMGGDLNSP 172

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amino acid sequence of a mature
OvIFNtau protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

SEGURATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: BAFEAITIN Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/616,904

FILING DATE: 15-MAR-1996

CLASSIFICATION: 514

ATTORNEY/AGENT INFORMATION:

NAME: Sholtz, Charles K.

REGISTRATION NUMBER: 38,615

REPRENCE/DOCKET NUMBER: 5600-0003

TELEPHONE: 415-324-0880

TELEPHONE: 415-324-0860

INFORMATION FOR SEQ ID NO: 2:

SEQUENCE CHARACTERISTICS:

LENGTH: 172 anino acids

TYPE: amino acids

Patent No. 6833256

GENERAL INFORMATION:
APPLICANT: Pontzer Carol H

TITLE OF INVENTION: Interferon Tau Mutants and Methods for Making Them
FILE REPERENCE: interferon tau
CURRENT APPLICATION NUMBER: US/09/599,413

CURRENT FILING DATE: 200-06-22

PRIOR FILING DATE: 1999-06-22

NUMBER OF SEQ ID NOS: 20

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 4

LENGTH: 172
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Peptide h Human NOV A tau mod Amino aci

Isoform o Sequence Ovi TP-1 Sheep IFN Human int

An ovine An ovine

```
This sheep IFN-tau protein is expressed in yeast, insect cells or E. coliusing expression vector phage lambda-gtil. The protein is useful for inhibitin tumor cell growth, for inhibiting viral replication in cells and enhancing fertility in female mammals. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Interferon tau compans - lacking cytotoxic side effects when used as antivirals, and anti:cellular proliferation agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 100.0%; Score 907; DB 2; Length 172; Best Local Similarity 100.0%; Pred. mammalian diseases responsive to IFN tau. The new feature in the treatment of the human interferon-tau (IFN tau) can be used in the treatment is that IFN tau is administered orally. The method is used to treatment is that IFN tau is administered orally. The method is used to treat immune, particularly autoimmune disease, specifically multiple sclerosis (a preferred application, reducing both severity and frequency of relapses), type I diabetes mellitus, lupus erythematosus, amyotrophic lateral sclerosis, Crohn's disease, rheumatoid arthritis, stomatitis, cathma, allergies and psoriasis, particularly in humans or dogs. IFN tau is also useful for treating cancer (e.g. hairy cell leukaemia, Kaposi's sarcoma and multiple myeloma), cell proliferation and miliple myeloma), cell proliferation and miliple myeloma). It is also used for increasing fertility in deternal transmission). It is also used for increasing fertility in demandals (increasing life time of the corpus luteum). Oral administration is as effective as injection but is more convenient and generates a lower level of anti-IFN tau antibodies. Use of IFN tau avoids the toxicity associated with use of IFN alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LOOSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGBEDSELGNMDPIVTV 120

ö LQQSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120 present invention. The present invention describes a novel chimeric nucleic acid which comprises: (i) a 5'segment encoding the N-terminal amino acid (as) sequence of an interferon tau (IFNt) polypeptide; and (ii) a 3'-sequence encoding the C-terminal as sequence of a non-tau type I interferon, with the two segments spliced in a region comprising part of the mature interferon between residues 8 and 3' Hybrid interferon fusion polypeptides are used to inhibit tumour growth (e.g. of steroidsensitive tumours) and viral replication (e.g. of human immunodeficiency virus, hepatitis B or C virus, feline leukaemia virus) and to treat reducingment diseases (e.g. lupus erryhematosus, type I diabetes, rheumatoid arthritis). Some hybrid interferon fusion polypeptides may block the antiviral/antiproliferative actions of IFNt, so can be used to prevent immune responses induced by interferons. 9 9 transplantation. The hybrid interferon fusion polypeptides can also be used to raise antibodies, used e.g. for analysis of structure/function relationships. The novel chimeric nucleic acid is used to produce recombinant hybrid interferon fusion polypeptides. Hybrid interferon fusion polypeptides are less toxic than type I interferons, so can be administered at higher doses CYLSRKLMLDARENLKLLDRMNRLSPHSCLQDRKDFGLPQEMVEGDQLQKDQAFPVLYEM CYLSRKLMLDARENLKLLDRMNRLSPHSCLQDRKDFGLPQEMVEGDQLQKDQAFPVLYEM 0; Gaps The present sequence represents mature ovine interferon tau from the 100.0%; Score 907; DB 2; Length 172; 100.0%; Pred. hepatitis C virus (HCV) in a HCV-infected patient. The composition comprises ovine interferon-tau (ovIFN-tau), in a dosage effective to stimulate bloodstream levels of 2.5'-ollogadenylate synthetase (OAS). The ovIFN-tau synthesizes OAS which degrades viral mRNA. A method is also provided for monitoring the treatment of HCV by oral administration of ovIFN-tau, by measuring the blood levels of OAS prior to and after such oral administration, and if necessary, adjusting the dose of IFN-tau until a measurable increase in blood OAS level, relative to the level observed prior to administration. The composition is useful for treating hepatitis caused by HCV and the method is useful for monitoring treatment of HCV by oral administration of ovIFN-tau. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 LQQSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120

Claim 3; SEQ ID NO 2; 28pp; English.

The invention relates to a composition for use in treating a condition responsive to interferon-tau, comprising an oral dosage form of inteferontau. The composition is administered to a patient in a fasted state to increase the level of 2',5'-oligoadenylate synthetase (OAS) in the blood relative to that obtained after administration of interferon-tau to a fed patient. The interferon-tau used in the composition is preferably ovine or bovine. The composition is useful in the treatment of autoimmune thyroidities, rematoid arthritis, workingly psoriasis, systemic lupus erythematosus, allergies, asthma, eczema, Crohn's disease or ulcerative colitis), viral infections (e.g., HIV infection or hepatitis), disorders associated with cellular proliferation (e.g., multiple myeloma, ovarian cancer or hairy cell leukaemia), or inflammatory diseases. The present sequence represents mature ovine interferon-tau.

The present invention describes a composition for the oral administration of an interferon (IFN) comprising an IFN and a species that stabilises the IFN in an active form by interaction between the IFN and the species. Also described: (1) preparing a protein for oral administration, comprising formulating a protein for oral administration, comprising formulating interaction between the protein and the species, therefore the formulating results in a composition for oral administration, and (2) selecting a dosage form composition for a protein administration, comprising selecting a protein for formulating results and activity upon in vivo administration, comprising selecting a protein for formulation, preparing solutions of the selected protein or polypeptide in different buffers at the protein's tertiary structure, where the measuring identifies buffers that result retention of the protein's tertiary structure. The composition and polypeptides. The present sequence represents the mature ovine interferon tau amino acid sequence, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (IFN) comprises an

The invention describes a method of treating a condition in a human administering interferon tau therapy comprises orally administering interferon—tau to the intesfinal tract of the subject to produce an initial measurable increase in the subject's blood 2',5'-oligoadenylate synthetase (OAS) level, relative to the blood OAS level in the subject in the absence of interferon—tau administration. The method is useful for treating an autoimmune condition, cancer, or a viral infection. The method is particularly useful for treating multiple srolerosis or hepatitis C infection, diabetes mellitus, systemic lupus ertyhematosus, amyotrophic lateral sclerosis, Crohn's disease, rheumatoid arthritis, asthma, uveitis, psoriasis, and hypersensitivity disorders. This is the amino acid sequence of ovine interferon—tau.
                                                                                                                                                                                                                                                                                                                                  immunosuppressive, cytostatic, virucide, neuroprotective, antidiabetic, muscular, antiniflammatory, antirheumatic, antiarthritic, antiasthmatic, dermarological, vaccine, interferon tau, 2',5'-oligoadenylate synthetase, OAS; autoimmune condition, cancer, viral infection; multiple sclerosis; hepatitis C infection; diabetes mellitus, systemic lupus erythematosus, amyotrophic lateral sclerosis; Crohn's disease; rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The bTP-1 produced from the gene may be used to promote fertility or treat viral disease in cattle. The gene may also be used to provide transgenic animals with enhanced fertility, or in prophylactic and therapuetic treatment of other mammals. (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                 This conceptus-derived ovine trophoblast protein-1 (oTP-1) is used in a compsn. for inhibiting tumour growth or viral replic- ation. It is an interferon and exerts its inhibitory effect on viruses , retroviruses and tumours without harming the cells of the host animal. Its fragments (indicated in features), or immunologically equivalent variants can also be used. (Updated on 25-MAR-2003 to correct PA field.)

The present invention describes a composition for the oral administration of an interferon (IFN) comprising an IFN and a species that stabilises the IFN in an active form by interaction between the IFN and the species. Also described: (1) preparing a protein for oral administration, comprising formulating the protein with a species that stabilises the protein with a species that stabilises the comprising formulating the protein with a species that stabilises the composition; and (2) selecting a dosage form composition for a protein and that species, therefore the formulating results in a composition for oral administration, and (2) selecting a dosage form composition for a protein that achieves protein stabilisation for biological activity upon in vivo administration, comprising selecting a protein for formulation, preparing solutions of the selected protein or polypeptide in different buffers at different ph values, and measuring the effect of the buffer on the protein's tertiary structure. The composition and methods are useful for preparing oral dosage forms for administration of the protein's tertiary structure. The composition and methods are useful for preparing oral dosage forms for administration of the protein's tertiary structure. The composition and polypeptides. The present sequence represents an interferon can amino acid sequence, which is used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                      The DNA sequence encoding the precursor of ovine trophoblastin was disclosed in PCT WO 89/08706 (see AAR2491). AAR24942-R24945 are isoforms of trophoblastin. They have anti-luteolytic activity and are used to improve burvival of transplanted embryos; as a reagent for detecting viability of embryos at an early stage of its development; and to improve the fertility of livestock. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                              New type I interferon variants with added N-terminal di:peptide - include expression cassettes providing high yield in yeast, esp. trophoblast derivs. with e.g. anti-luteolytic activity.

The present sequence represents an ovine interferon-tau Imod polypeptide.

The specification describes a method of making recombinant interferon

(IFN)-tau proteins, which differ from wild-type IFN-tau by amino acid
substitutions near the amino terminus of the molecule. The mutated IFN-

tau proteins have improved biological activity, low toxicity, retain the

same or slightly reduced antiviral activity compared with interferon

capha, and have enhanced antiproliferative activity compared to wild-type

IFN-tau. The method is used for producing IFN-tau proteins with improved

cological activities and properties. These IFN-tau may be administered

cological activities and properties. These IFN-tau may be administered

cological activities and properties. These IFN-tau proteins with improved

cological activities and properties. These IFN-tau may be administered

cological activities and properties. These IFN-tau proteins with improved

cological activities and properties. These IFN-tau proteins with improved

colorects and decrease tumour growth, treat viral diseases, treat

autoimmune diseases and treat multiple sclerosis. The cancer or tumour is

calcuted from the group comprising human adenocarcinoma, breast cancer,

colorectal cancer, glioblastomas, melanomas, myelomas,

colorectal cancer, skin cancer, bander cancer, bone cancer,

colorectal cancer, cervical and oral dysplasia. The autoimmune disease is

colorectal from Type I diabetes mellitus, rheumatoid arthritis, lupus

cerythematosus and/or psoriasis. The viral infection is an RNA virus, a

human immuno deficiency virus (HIV) or hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LOOSFNLFYTEHSSAAWDITLLEQLCTGLOOQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120

The invention relates to an artificial ovine interferon-tau (OVIFN-tau) gene designed for high yield protein production in yeast, and constructed by reducing repetitive sequences, lowering overall G+C content, reducing or eliminating palindromic sequences, and optimising the sequence of OVIFN-tau, using the biased codon usage in the yeast. The expression vector if the invention is useful for high yield production of OVIFN-tau in the yeast of Pichia, preferably P. pastoris X33 or P. pastoris GS115, by transforming the yeast with the expression vector, inducing protein expression with methanol, culturing the yeast in defined culture conditions such as shake flask or fermenter, and purifying the protein from culture media. This sequence represents the ovine interferon-tau (OvIFN-tau) protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New artificial ovine interferon-tau gene, useful for high protein production, constructed by reducing repetitive and palindromic sequences, lowering overall guanine and cytosine content and optimizing gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 LOOSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 LQQSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQGMGEEDSELGNMDPIVIV 120

The invention provides an oral-delivery composition for use in treating hepatitis C virus (HCV) in a HCV-infected patient. The composition comprises ovine interferon-tau (ovIFN-tau), in a dosage effective to stimulate bloodstream levels of 2',5'-oligoadenylate synthetase (OAS). The ovIFN-tau synthesizes OAS which degrades viral mRNA. A method is also provided for monitoring the treatment of HCV by oral administration of ovIFN-tau, by measuring the blood levels of OAS prior to and after such oral administration, and if necessary, adjusting the dose of IFN-tau until a measurable increase in blood OAS level, relative to the level observed prior to administration. The composition is useful for treating hepatitis caused by HCV and the method is useful for monitoring treatment of HCV by oral administration of ovIFN-tau. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 LQQSFNLFYTEHSSAAWDTTLLEQLCTGLQQQLDHLDTCRGQVMGEEDSELGNMDPIVTV 120

recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptors probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFV-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cytotoxicity, high antiluteolytic activity and immunomodulatory in properties. In contrast with other IFNs, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                 SUBCELLULAR LOCATION: Secreted into the uterine lumen. TISSUE SPECIFICITY: Constitutively and exclusively expressed in the monouclear cells of the extra-embryonic trophectoderm. DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy. MISCELLANBOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. Hely encode for proteins very similar in sequence but with different biological potency and pattern of expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium in the receptor expression of the pulsatile endometrium of the luteolytic, hormone prostaglandin P2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclocxicity, high antiluteolytic activity and immunomodularcry properties. In contrast with other IFNS, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=99081096; PubMed=9865498; DOI=10.1016/S0300-9084(99)80029-7; Martal J.L., Chene N.M., Huynh L.P., L'Haridon R.M., Reinaud P.B., Guillomot M.W., Charlier M.A., Charpjany S.Y.; Introven a novel subtype I IRN. Structural characteristics, non-ubiquitous expression, structure-function relationships, a pregnancy hormonal embryonic signal and cross-species therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SUBCELLULAR LOCATION: Secreted into the uterine lumen.
-!- TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm.
-!- DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-!- POLYMORPHISM: There seems to be three variants of IFN-tau 2:
-- AF PRVZ/PT (shown here), B/PSV4 and C/PS.
-- MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-cmega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    They encode for proteins very similar in sequence but with different biological potency and pattern of expression. SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphalI subfamily.

NCBI_TaxID=9940; Caprinae; SEQUENCE INT4_SHEEP ò ò g ò recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium is results in the corpus luteum (luteolysis) and therefore a return to ovarian prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclotoxicity, high antiluteolytic activity and immunomodulatory properties. In contrast with other IFNs, IFN-tau is not virally This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch). -i TISSUE SPECIFICITY: Constitutively and exclusively expressed in the monouclear cells of the extra-embryonic trophectoderm.

-! DBVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.

-! POLYMORPHISM: There seems to be two variants of IFN-tau 3: A/P8V1 (shown here) and B/P8V3.

-! MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.

-! SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily. REVIEW.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   83
                                                                                                                                                                                                                                                                                                   -1- SUBCELLULAR LOCATION: Secreted into the uterine lumen.
-1- TISSUE SPECIFICITY: Constitutively and exclusively expressed in the monounclear cells of the extra-embryonic trophectoderm.
-1- DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-1- MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.
-1- SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphall subfamily.
                    expression, preventing the estrogen-induced increase in oxytocin succeptor expression in the endometrium. This results in the suppression of the pulsatile endometrium. This results in the hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiprollierative potency concurrently with particular weak cytotoxicity, high antiluteolytic activity and immunomedulatory properties. In contrast with other IFNs, IFN-tau is not virally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              InterPro; lrnc...

L. FUNCTION: Paracrine hormone primarly responsible for maternal recognition of pregnancy. Interacts with endomerrial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxyrocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium in the regression of the pulsatile endometrium to certain the corpus luteum (luteolysis) and therefore a return to continued ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian prostaglandin secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cycloxicity, high antiluteolytic activity and immunomodularcry individuals.

Cetartiodactyla, Ruminantia, Pecora, Bovidae,
                           They encode for proteins very similar in sequence but with different biological potency and pattern of expression. SIMILARITY: Belongs to the alpha/beta interferon family. IFNalphalI subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121 KKYFQGIYDYLQEKGYSDCAWEIVRVEMMRALIVSTTLQKRLTKMGGDLNSP 172

                                                                                                                                                                                    recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclocxicity, high antiluteolytic activity and immunomodulacory properties. In contrast with other IFNs, IFN-tau is not virally

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -:- SUBLEADULAR JOUGHILOW: SECTECEG INTO THE ULTER LUMEN.
-!- TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm.
-!- DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-!- MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.
-!- SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

recognition of pregnancy. Interacts with endomerrial receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptors, probably type I interferon receptors, and blocks estrogen receptor expression in the estrogen-induced increase in oxytocin receptor expression in the endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the oxytocin corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutrients required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclocaxicity, high antiluteolytic activity and immunomodularcry inducible.

-i-DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-i-MISCELLANEOUS: IFN-tau genes are intronless. They evolved from IFN-omaga genes in the ruminantia subcorder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.
-i-SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily. Gaps ProDom; PD000550; Interferon abd; 1. PROSITE; PS00252; INTERFERON A B D; 1. 1. FUNCTION: Paracrine hormone primarly responsible for maternal recognition of pregnancy. Interacts with endometrial receptors, probably type I interferon receptors, and blocks estrogen receptor expression, preventing the estrogen-induced increase in oxyrocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrium. This results in the hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to confinued ovarian progesterone secretion, which stimulates the secretion by the endometrium of the nutriens required for the growth of the conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyctoxicity, high antilutedolytic activity and immunomodularcy is an encourage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. -:- DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy.
-:- POLYMORPHISM: There seems to be four variants of IRN-tau 6:
A/PGV3, B/PGV2, C/PGV1 and D/P6/P12 (shown here).
-:- MISCELLANBOUS: IRN-tau genes are intronless: They evolved from IRN-onnega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different biological potency and pattern of expression.
-:- SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alpha11 subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        By similarity.

         recognition of pregnancy. Interacts with endometrial receptors, probably type I interfactor receptors, and blocks estrogen receptors, expression, preventing the estrogen-induced increase in oxytocin receptor expression in the endometrium. This results in the suppression of the pulsatile endometrial release of the luteolytic hormone prostaglandin F2-alpha, hindering the regression of the corpus luteum (luteolysis) and therefore a return to continued ovarian cyclicity. This, and a possible direct effect of IFN-tau on prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian prostaglandin synthesis, leads in turn to continued ovarian conceptus. In summary, displays particularly high antiviral and antiproliferative potency concurrently with particular weak cyclotxicity, high antiluteolytic activity and immunomodularcry in properties. In contrast with other IFNs, IFN-tau is not virally

                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Secreted into the uterine lumen. TISSUE SPECIFICITY: Constitutively and exclusively expressed in TISSUE SPECIFICITY: Constitutively and exclusively expressed in the mononuclear cells of the extra-embryonic trophectoderm. DEVELOPMENTAL STAGE: Major secretory product synthesized by the sheep conceptus between days 13 and 21 of pregnancy. MISCELLANBOUS: IFN-tau genes are introlless. They evolved from IFN-omega genes in the ruminantia suborder and have continued to duplicate independently in different lineages of the ruminantia. They encode for proteins very similar in sequence but with different blological potency and pattern of expression. SIMILARITY: Belongs to the alpha/beta interferon family. IFN-alphaII subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3, Sequen
